VERTICAL GARDEN
TECHNOLOGY

STRUCTURED VERTICAL GARDEN SOLUTIONS

SkyGrow Structured Vertical Garden solutions are purpose-built to address main inherited problems in conventional vertical gardens.

- a. SkyGrow vertical garden solutions come with specially engineered fabric. Hence, it gives better aeration to the root structure and drains out the excess water much efficiently.
- b. Roots are well protected from outside heat due to the air barrier created by the thick fabric.
- c. Thanks to the embedded Drip Irrigation System, plants receive the right quantity of water at the right time.

STAND ALONE TYPE VERTICAL GARDEN SOLUTIONS

- SkyGrow Stand-alone vertical garden structures are on DIY (Do it yourself) concept. All you have to do is, to take home the SkyGrow stand-alone unit and connect it to the waterline, and it will be ready to install your preferred live plants.
- The product is ideal to make any courtyard, backyard, terrace or any outdoor area into a lush green vertical garden.
- SkyGrow stand-alone structures can be supplied as single-sided or double-sided planting structures.

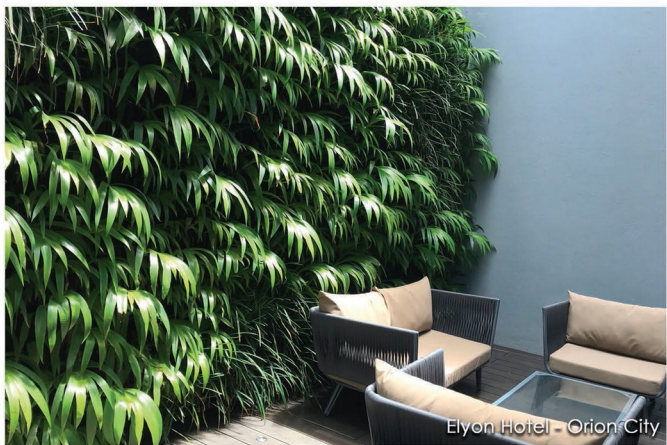

EXTERNAL SUPPORTED VERTICAL GARDEN SOLUTIONS

- Thanks to the special design of "SkyGrow External Supported Structured Vertical Garden Solutions", the product can be easily wall-mounted or mounted between the slabs.
- The Drip irrigation system is pre-installed.
- The Standard size of the product is 1m (W) x 3.5m (H) however, the product can be customized to match the site condition.
